C Contributors	Members of this group can add, modify, and delete items within the team project.	Group
PA Project Administrators	Members of this group can perform all operations in the team project.	Group
PU Project Valid Users	Members of this group have access to the team project.	Group
PT project1 Team	The default project team.	Team
R Readers	Members of this group have access to the team project.	Group
RA Release Administrators	Members of this group can perform all operations on Release Management	Group

Now we can assign task to that user

If other user not able to see the assigned work, go to organization settings->Users and add user

The screenshot shows the Azure DevOps 'Organization Settings' page for 'Org-1112', specifically the 'Users' section. The 'All users' tab is active, showing a table with one user: 'azuser2362_mml.local' with an 'Access Level' of 'Basic'. An 'Add new users' dialog is open on the right, allowing the addition of a new user. The dialog includes fields for 'Users or Service Principals' (with a search bar), 'Access level' (set to 'Basic'), 'Add to projects' (set to 'project1'), and 'Azure DevOps Groups' (set to 'Project Contributors'). A checkbox for 'Send email invites (to Users only)' is checked. 'Cancel' and 'Add' buttons are at the bottom right of the dialog.

We can add repository also

The screenshot shows the 'project1' repository page in Azure DevOps. The left sidebar has 'Repos' selected. The main area displays the message 'project1 is empty. Add some code!'. It provides three options to add code: 'Clone to your computer' with 'HTTPS' and 'SSH' links, 'Push an existing repository from command line' with a 'git remote add' command, and 'Import a repository' with an 'Import' button. A 'Generate Git Credentials' button is also present under the cloning options.
